Report of event/ activity

Event: CodeSpree

Codespree is a pre-event to the “Crackathon” that takes place during “Abhyantriki” (tech -fest). It was an online coding event conducted on CodeChef, with links sent to all the registered participants. The top 15 participants from CodeSpree get a straight entry into the crackathon's third round, making this competition even more important. Competitors' arithmetic and thinking abilities were put to test in this three-hour challenge which consisted of five problems of varying degrees of complexity.

The answers to the questions were to be submitted in any of the languages accessible on the CodeChef site. Solutions were put to testing in a variety of test cases, and the outcomes were compared to those of proper solutions. Rank was based on the number of questions solved and the amount of time it took to solve each problem. Also there was a time penalty for the submission of inaccurate solutions, which would harm the ranking.

The contest drew a large number of entrants from all four years of engineering and other technical disciplines from all across Mumbai. The contest had a massive response, with over 170+ people taking part.
